

SUCCESS STORY

Project type: Building Thermal Insulation
Company: Mining Equipment Manufacturer

An SME which specializes in the manufacturing of mining equipment was using an industrial building with poor insulation, which was resulting in excessive heating costs. The company decided to use a PolSEFF loan to replace windows and skylights, and to insulate the walls and roof of the building.

In addition to financing, PolSEFF conducted an energy audit of the building, evaluating different insulation measures and identifying those with the highest ROI. The project is expected to reduce the company's heating bill by 54%. After the project's completion, the company will receive an investment incentive of 15% of the loan amount.

The Company

Main activities	Manufacture of mining equipment
Project location	Wilków, Southwestern Poland

Project goals and main investment

Main investment	Wall and roof insulation; replacement of windows and skylights.
Project goals	To reduce heating costs for the manufacturing and storage halls.
Investment size	€342,655

Expected results

Operational results	Energy saving for heating of 54%
Financial results	Investment incentive of 15% of the value of the loan
